

# Protect your portfolio from cyber attacks in three steps

Written by Anthony Dagostino,  
President & Chief Underwriting Officer, Avoca Risk LLC

Threats and their associated risks change constantly. Conduct regular assessments to ensure you remain protected as your operations change and threats evolve.

1. Quantify risk

2. Assess controls

3. Consult trusted resources

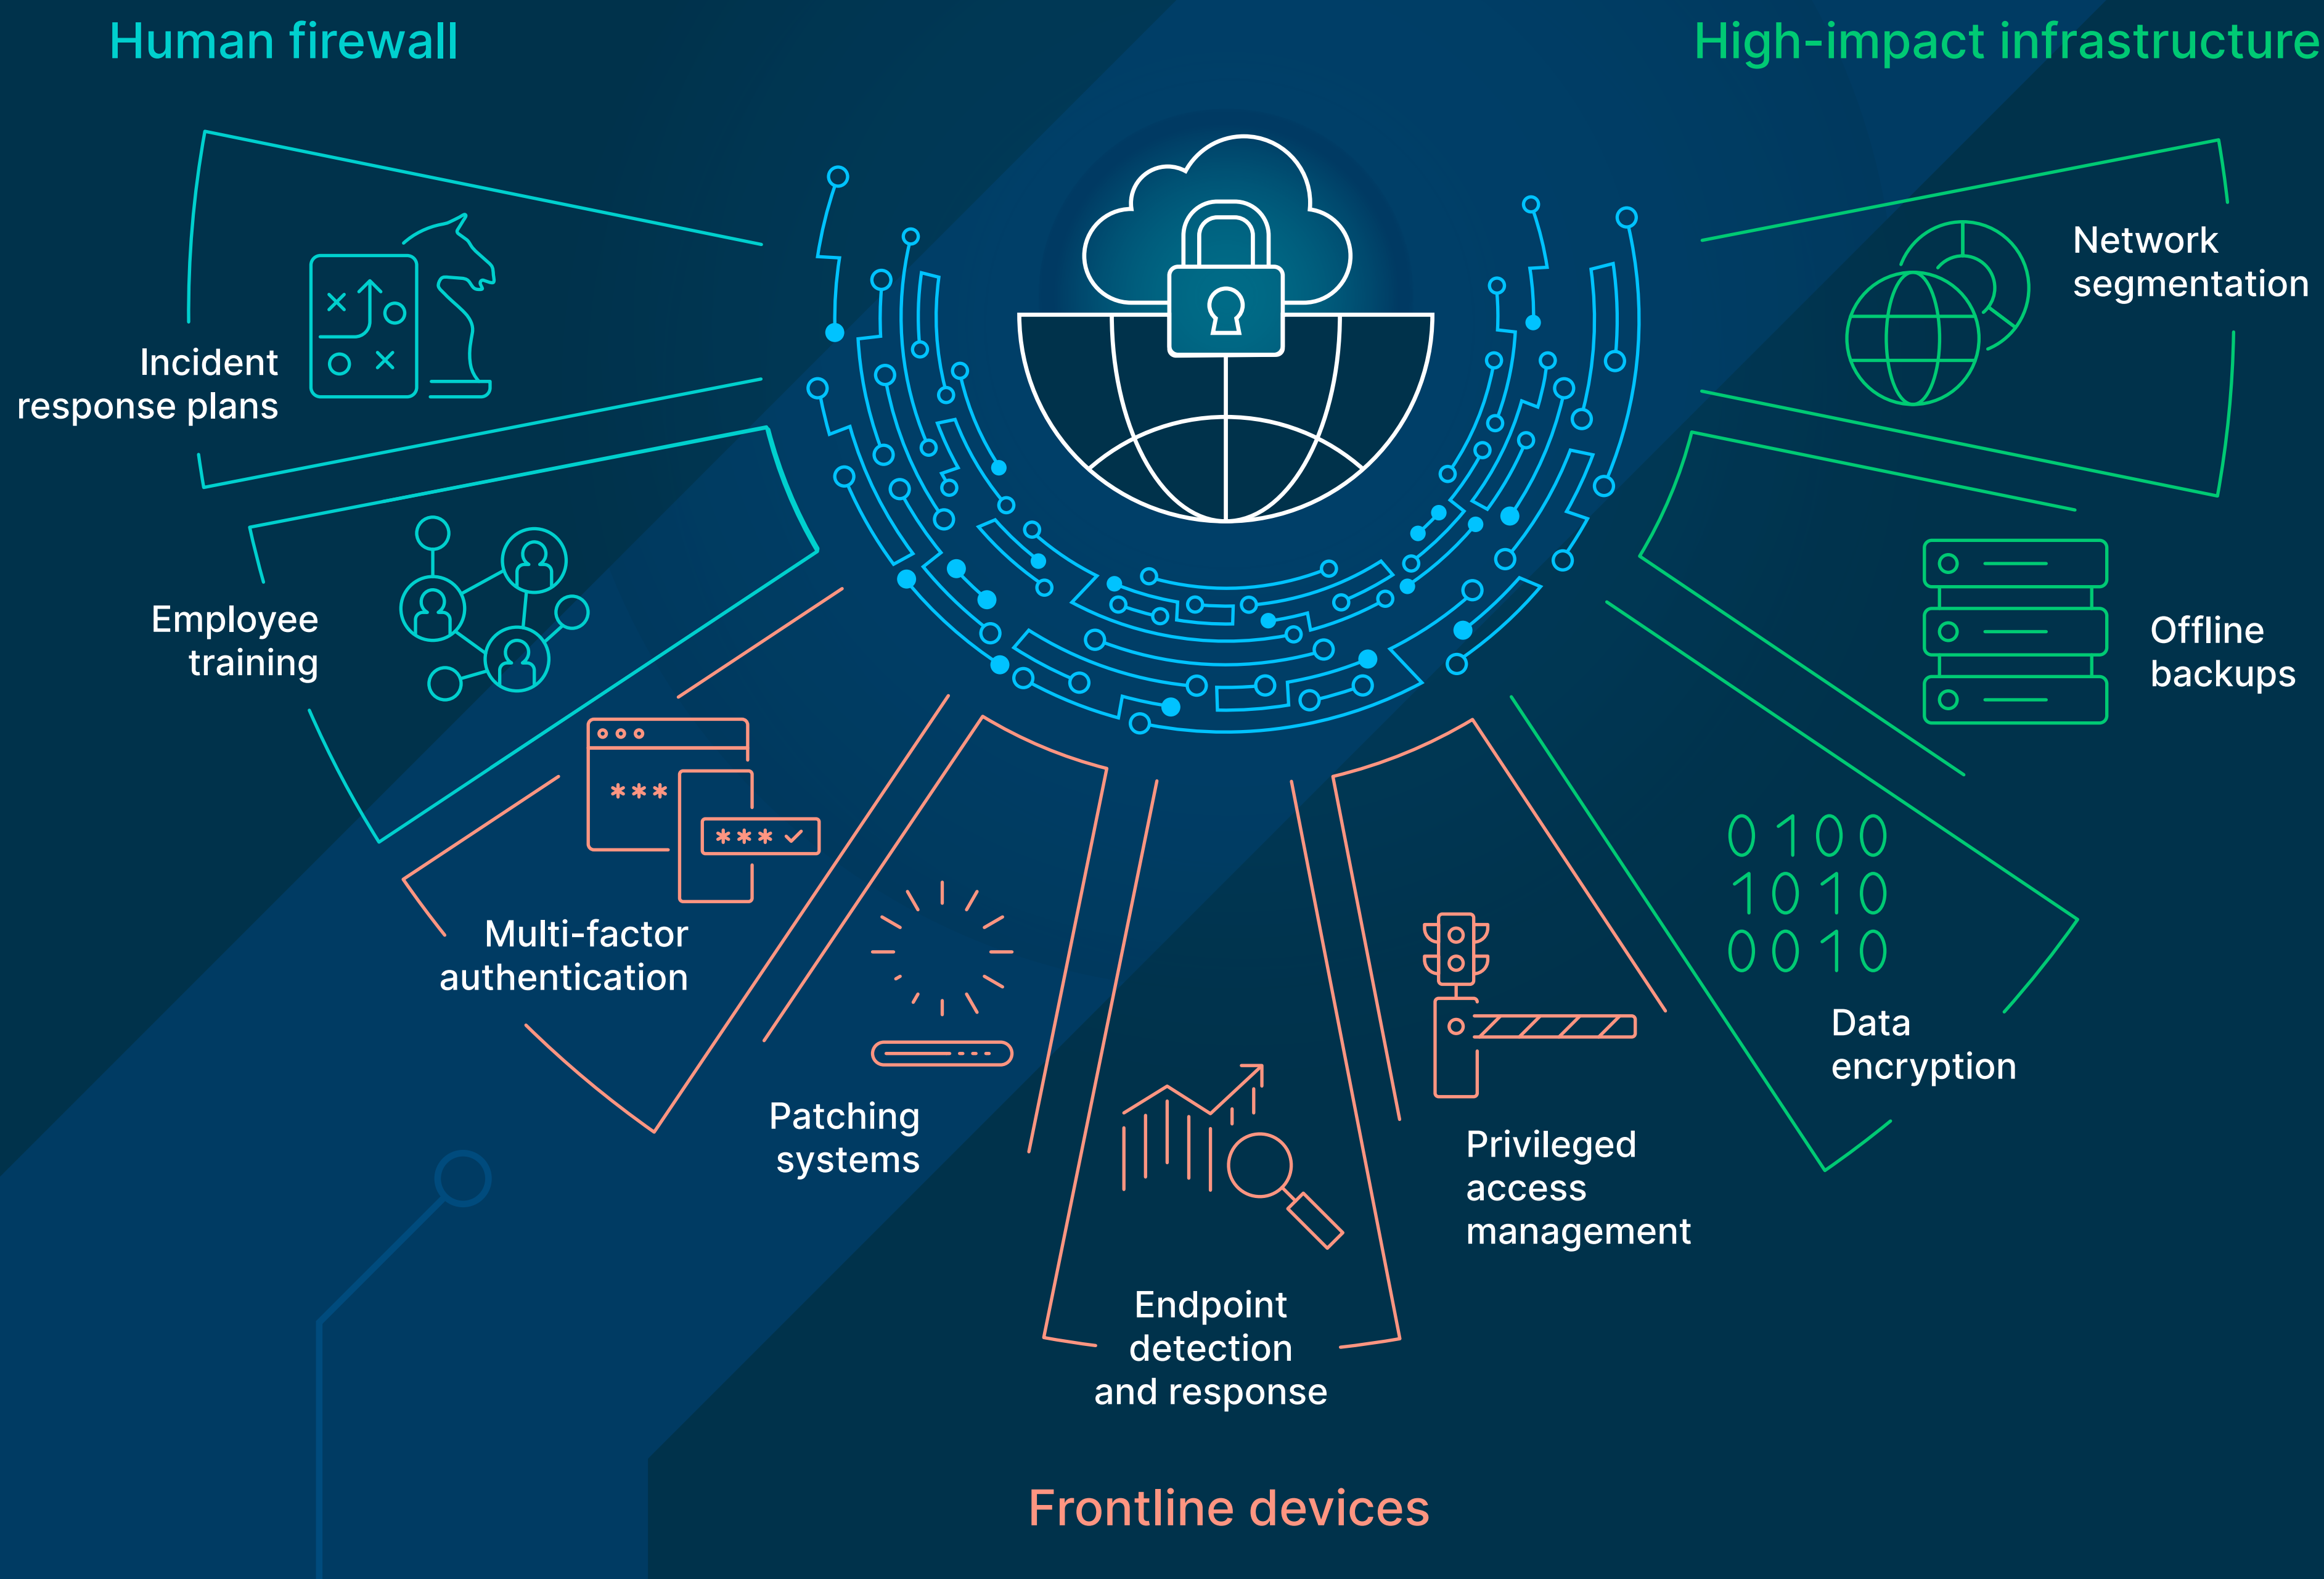

## Step 1: Quantify risk

Start by assessing your exposure to cyber threats, as well as any coverage you may already have

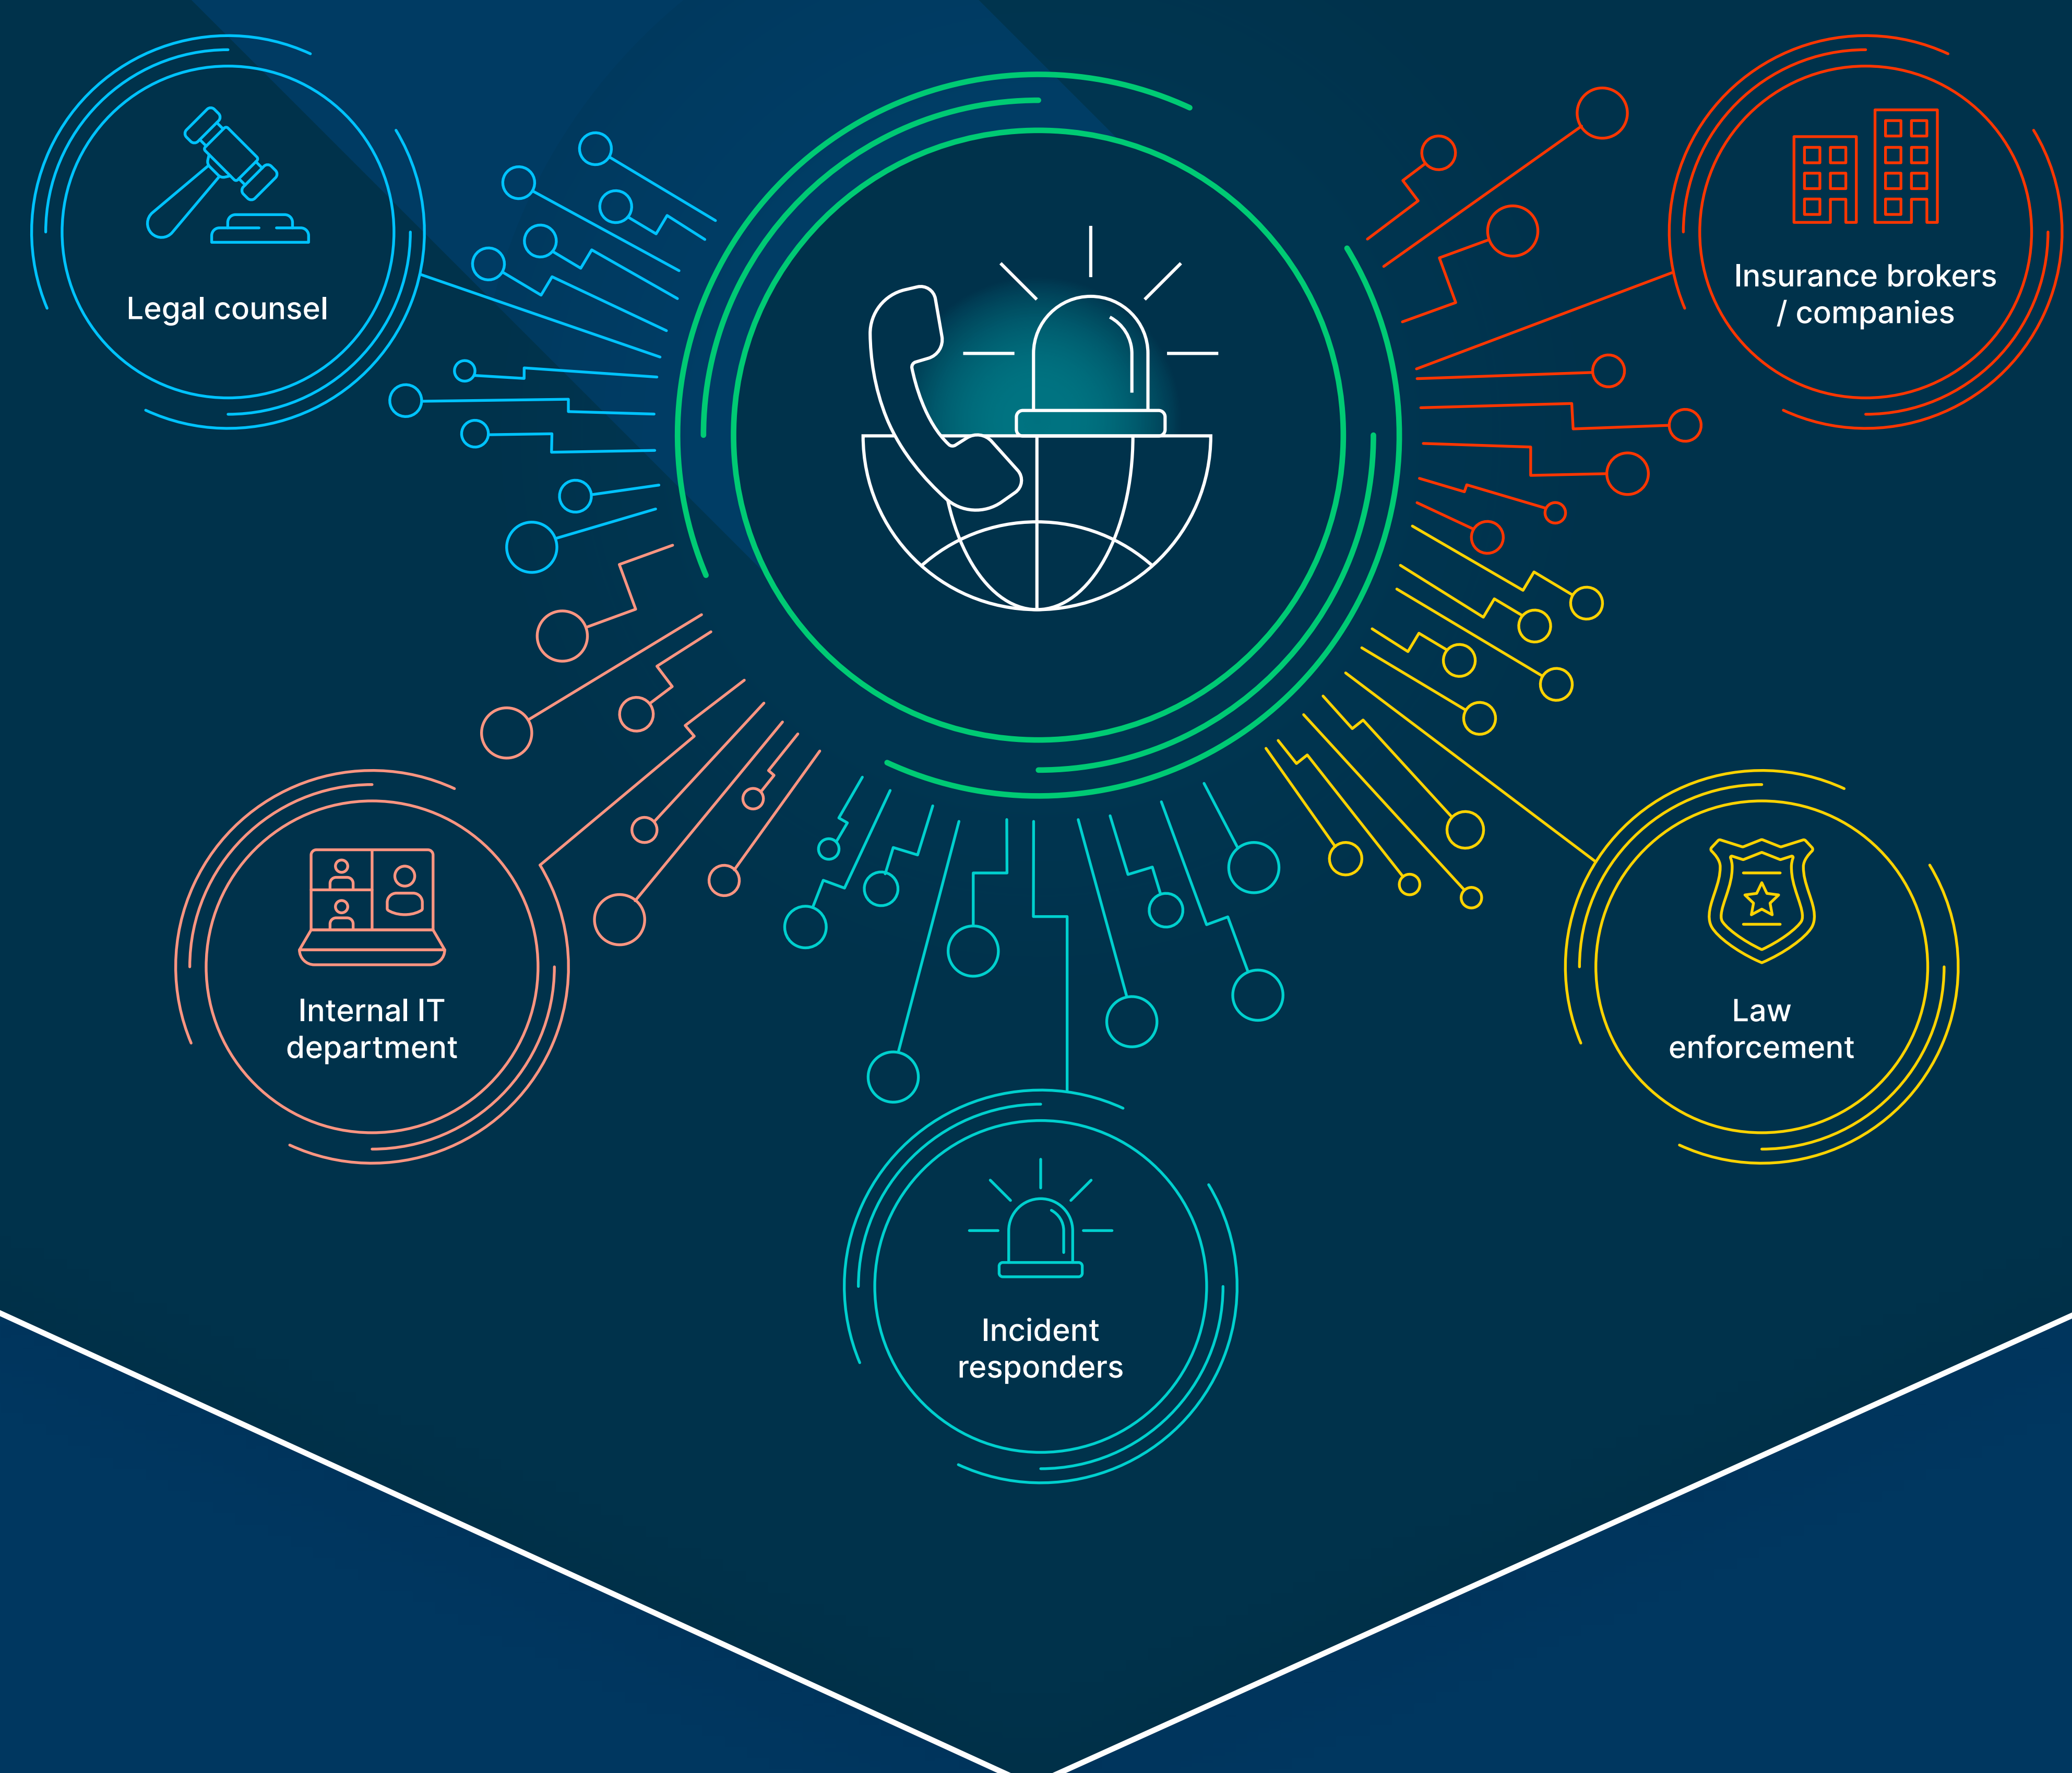

## Step 2: Assess controls

Optimize your security spend by putting the money where it matters, in these nine critical controls

## Step 3: Consult trusted resources

Engage providers and partners to support your efforts in the event an attack does occur

1. Re-quantify risk

Continuously revisit these steps to stay current as threats evolve

3. Refine trusted resources

2. Reassess controls

More about the author  
**Anthony Dagostino**  
President & Chief Underwriting Officer, Avoca Risk LLC

Anthony Dagostino has more than two decades of experience in insurance and risk management, with a particular focus on cyber, technology, and financial lines. In addition to founding a next-generation cyber Insurtech company, he has advised some of the world's largest companies on risk management strategies, practical applications for risk quantification, and operational risk focused approaches to cybersecurity.
